**MECHEM MINE PROTECTED GRADER**

## MECHEM MINE PROTECTED GRADER (MMPG)

MECHEM has developed a Mine Protected Cabin which can be fitted on a Road Grader, keeping the operator safe from the effects of a landmine blast up to the blast of an anti-tank mine. The MMPG provides more flexibility during the execution of Road Clearance Operations in areas suspected of containing landmines, especially during the emergency phase of peace keeping operations where rapid road rehabilitation needs to be done.

The MMPG is fitted with rippers in the front of the vehicle enabling it to expose sub-surface objects up to a depth of 400mm.
